Pedestrian Priority Zone Map and Guidelines

The Pedestrian Priority Zone (PPZ) referenced in the Battery-Powered Micro Mobility Devices Policy and Golf Cart Policy reflects Trinity University's commitment to creating a safer, more walkable campus by prioritizing pedestrian access in the highest-traffic areas of North Campus. On the routes shown in red, pedestrians have priority over all other modes of transportation, except during emergencies. By reducing vehicle congestion and enhancing the pedestrian environment, the PPZ supports a safer, more accessible, and welcoming campus experience for students, faculty, staff, and visitors.

Non-Battery-Powered rolling devices: Bicycles, Scooters, Skateboards, and Similar Devices

Non-battery-powered rolling devices are permitted to be operated within designated PPZ areas, provided they are operated safely and in accordance with University policies and posted signage. Operators must:

- Yield to pedestrians at all times.
- Maintain a safe speed and remain in control of their device.
- Avoid reckless riding or behavior that could endanger others.
- Park only in approved locations without obstructing sidewalks, building entrances, exits, or accessible pathways.

Battery-Powered Micro Mobility Devices Policy

Battery-powered micromobility devices, including electric bicycles and scooters, are permitted within designated PPZ areas **only when dismounted and walked**. For purposes of these guidelines, walking means the operator is physically walking alongside the device or carrying it. Slow riding, coasting, or powered operation does not qualify as walking.

Golf Cart Policy

Golf carts and University vehicles are permitted within designated PPZ areas only when necessary for authorized University operations and must travel at walking speed.
